DETAILED ACTION
EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William Foster on 4/22/2009.

Claim 34 is canceled.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: The closest prior art of Berreklouw (WO 00/24339) in view of Akin et al. (US 6,458,140; "Akin") and Collito (US 3,254,650) will be discussed with respect to claim 13. The closest prior art of Gifford, III et al. (US 6,371,965; "Gifford") in view of Berg et al. (US 6,074,416; "Berg") will be discussed with respect to claim 35.

Regarding claim 13, Berreklouw discloses a method of connecting two conduits including positioning first and second saddles disposed at first ends of first and second couplers, respectively, within first and second conduits, respectively, clamping the first and second conduits to the first and second saddles, respectively, and connecting the first and second couplers (fig. 16). Berreklouw fails to disclose conforming a first and second tissue clamp substantially to the shape of the first and second saddles, respectively. Berreklouw also fails to disclose the following: spacing a first flange of said first coupler from said first conduit and spacing a second flange of said second coupler from said second conduit and connecting said first coupler and said second coupler by positioning a first flange disposed at a second end

of said first coupler in alignment with a second flange disposed at a second end of said second coupler; engaging a first mating surface of said first flange and a second mating surface of said second flange; and crimping a clamping ring around said first flange and said second flange to secure said first coupler and said second coupler together. Akin teaches providing a longer flow channel between two vessels with a connector (122) therebetween but does not disclose forming the connector from two mating flanges and a clamping ring (figs. 9-11b). Collito teaches joining two mating flanges of anastomosis couplers with a clamping ring (fig. 2-5; col. 4 ll. 40-45). However, Berreklouw, Akin and Collito fail to make obvious spacing the flanges from their respective conduits since Akin discloses that the connector (122) is in a sealing relationship with the outer walls of the interconnected vessels. Furthermore, Berreklouw, Akin, and Collito all fail to disclose or fairly suggest conforming a first and second tissue clamp substantially to the shape of the first and second saddles.

Regarding claim 35, the prior art of Gifford in view of Berg teaches a method of delivering a coupler into a blood vessel wherein the coupler comprises a fixed saddle (167), a channel, a tissue clamp (168, 171), and a flange (170; figs. 9-12). The method comprises the steps of bending the tissue clamp away from the saddle (as made obvious by Berg), delivering the fixed saddle into the blood vessel, and releasing the tissue clamp to move the tissue clamp to the fixed saddle. The tissue clamp, when released, moves toward the fixed saddle but Gifford fails to disclose or fairly suggest substantially conforming the tissue clamp to the shape of the fixed saddle (see figs. 9, 10 of Gifford).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
